

Project Support Session

Agenda

- Project Problem Statement and Dataset Overview
- Open Q&A
- Project Evaluation Rubric
- Project Submission Guidelines

Project Problem Statement

Business Context

ShopNest Global is a large-scale e-commerce platform operating across 30+ countries, serving over 50 million active customers and employing 2,000+ human support agents who run 24/7 across the US, Europe, India, and Southeast Asia, across product categories including electronics, fashion, groceries, and home appliances.

ShopNest processes over 200,000 orders per day. With every order comes the possibility of a delivery delay, a payment failure, a wrong item, or a return request. Customers reach out to the support team through tickets to report these issues and expect a fast, accurate resolution.

Every order carries a risk of delivery delays, payment failures, wrong items, and returns, all of which generate support tickets. These tickets are written in highly unstructured ways: some are overloaded with background details where the real issue is buried, others use abbreviations, shorthand, and order codes that are hard to interpret, and some contain so little information that the issue is unclear. As a result:

- Human agents spend the first 2–3 minutes on each ticket just trying to decode what the customer is asking before any resolution work can begin.
- During peak periods (sales, holidays, logistics disruptions), daily ticket volume can spike from ~5,000 to ~15,000, multiplying this inefficiency. High volume and inconsistent ticket content contribute to human agent fatigue and higher error rates when accuracy is most critical.
- Drafting responses is manual, slow, and inconsistent in tone and clarity across human agents, leading to suboptimal customer experiences.

Project Problem Statement

Objective

The objective is to build a POC of an AI-powered ticket intelligence system for the customer support operations of ShopNest Global that:

- Reads incoming customer support tickets in their raw, unstructured form - including overloaded, jargon-filled, and incomplete submissions - and produces a clean, concise summary that gives the support agent an accurate understanding of the customer's issue on first read.
- Generates a professional, empathetic response to the customer that acknowledges their issue and communicates a clear next step, enabling human agents to have a draft response with consistent response quality for their review.
- Evaluates both the generated summary and the generated response automatically using an LLM-as-a-Judge framework, scoring each output against task-specific criteria to ensure quality is measurable, consistent, and auditable at every stage of the pipeline.

The end goal is to demonstrate that AI-assisted summarisation, response generation, and automated evaluation can meaningfully improve the consistency and quality of customer support operations at scale, sufficient to justify broader adoption across ShopNest's global support teams.

Dataset Overview

- The data contains the different attributes of the various products and stores

Column Name	Description
support_ticket_id	Unique identifier of the support ticket
support_ticket_desc	Description of the support ticket

Project Evaluation Rubric

Section	Points

What to Cover?

Load the data

Display the data

Guiding Questions and Considerations

Have you correctly loaded the dataset and ensured that the data is accessible for further analysis?

Does the displayed data provide a clear initial understanding of the structure and content of the dataset?

What to Cover?

Setup an LLM with appropriate rationale for the choice of model used

Set parameters such as temperature and max tokens with appropriate rationale

Choose the prompting technique with appropriate rationale

Guiding Questions and Considerations

Have you selected an appropriate LLM and clearly justified its suitability for the summarization task?

Have you configured parameters like temperature and max tokens with a clear and logical rationale?

Have you chosen a prompting technique that aligns with the task and justified its effectiveness?

What to Cover?

Write a system message with clear rules and output format

Generate ticket summaries

Provide observations based on the output received

Guiding Questions and Considerations

Does the system message clearly define rules, instructions, and the expected output format?

Do the generated summaries accurately capture the key intent and details of the tickets?

Have you derived meaningful observations from the generated summaries?

What to Cover?

Setup an LLM with appropriate rationale for the choice of the model used

Write a system message with criteria and rules

Generate the output scores

Provide observations based on the output received

Guiding Questions and Considerations

Have you selected an appropriate LLM and justified its role in evaluating summarization quality?

Does the system message clearly define evaluation criteria and scoring rules?

Have you generated evaluation scores that reflect the quality of the summaries?

Have you interpreted the evaluation results to identify strengths and gaps in summarization?

Have you derived actionable insights and recommendations that clearly align with business objectives?

Project Evaluation Rubric

Data Loading	Summarization	Evaluation for summarization	Response Generation	Evaluation for response generation	Output & Compilation	Actionable Insights & Recommendations	Presentation / Notebook Quality
Low-Code Considerations			Full-Code Considerations			No-Code Considerations	
Clear structure, flow, and visual appeal - everything sits well in a story			Clear structure and flow			Clear structure, flow, and visual appeal, screenshots of n8n workflow	
Crispness - Focus on key points			Well-commented and executed code			Crispness - Focus on key points	
All sections of the rubric included, even if in an appendix			All sections of the rubric included, even if in an appendix			All sections of the rubric included, even if in an appendix	

Project Submission Guidelines: Low-Code

For learners who aspire to be in managerial roles in the future, focusing on solution review, interpretation, recommendations, and communication with business stakeholders

Download the dataset and the *Learner Notebook - Low Code* (this is a template notebook)

Fill in the blanks in the notebook to complete and execute the code to solve the questions and perform all the tasks as per the grading rubric

Once the notebook is completely executed and necessary outputs obtained, a business presentation (using Microsoft PowerPoint, Google Slides, etc.) has to be created

Project Submission Guidelines: Low-Code

The presentation should contain observations, insights, and recommendations for the business problem

The presentation template provided can be referred to as a sample

Once the presentation is complete, convert the presentation to .pdf format

The presentation should be submitted as a PDF file (.pdf) and NOT as a .pptx file

Please make sure that all the sections mentioned in the grading rubric have been covered in the submission

Project Submission Guidelines: Full-Code

For learners who aspire to be in hands-on coding roles in the future, focusing on building solution from scratch

Download the dataset and the *Learner Notebook - Full Code* (this is a template notebook containing high-level steps to perform and insight-based questions)

Write necessary code to solve the questions and perform all the tasks as per the grading rubric

Clearly write down observations, insights, and recommendations for the business problem based on the analysis

Once the notebook is complete, download it as a **.ipynb** file and convert it to a **.html** file

Project Submission Guidelines: Full-Code

The notebook should be submitted as an HTML file (.html) and NOT as a notebook file (.ipynb)

The conversion can be done via [free online tools](#)

Please make sure that all the sections mentioned in the grading rubric have been covered in the submission

Project Submission Guidelines: No-Code

For learners who aspire to be in managerial roles in the future, focusing on solution review, interpretation, recommendations, and communication with business stakeholders

A guided sample **Solution Approach And Presentation Guidelines** doc has been provided; refer to this document for the sample approach and general guidelines for the submission

Build an n8n workflow using the dataset provided. Make sure all nodes have been executed and completed without errors

Once the n8n workflow is completely executed and necessary outputs obtained, a business presentation (using Microsoft PowerPoint, Google Slides, etc.) has to be created

Project Submission Guidelines: No-Code

The presentation should contain observations, insights, screenshots of n8n and recommendations for the business problem

The presentation template provided can be referred to as a sample

Once the presentation is complete, convert the presentation to .pdf format

The presentation should be submitted as a PDF file (.pdf) and NOT as a .pptx file

Please make sure that all the sections mentioned in the grading rubric have been covered in the submission

Power Ahead!
